

CHOROS

Year Map · Cohort AI Teacher

Documentation as Single Source

Model never goes outside uploaded docs. **Time drifts — content does not.** If a teacher uploads only "Algebra," the system produces output grounded in "Algebra" and nothing more. Full transparency: the system shows exactly what information it has and what is missing.

Model Tiers

- **Tier 1 (8–14B):** Scoring + gap reports
- **Tier 2 (32–35B):** Lessons, quizzes, pacing, remediation
- **Tier 3 (70B+):** Crystallization, MOY, clustering
- Build for Tier 2 first — prove it on 32B local hardware.

Student vs. Non-Student Split

- **Frontier model:** Crystallization, MOY generation, pre-assessments — batch jobs, non-student-facing
- **Local model (Lenovo):** Lesson delivery, quiz scoring, misconception tagging — student-facing
- **Deterministic:** Mastery scoring — **never AI**

Audit Log — Non-Negotiable

- Every teacher action modifying state is **recorded**
- Crystallization approved? **Logged.**
- Lesson bundle accepted? **Logged.**
- Pacing adjusted? **Logged with reason.**
- Protects the teacher **and** the system.
